

SILICOR TECHNOLOGIES, INC.

DIGITAL CCTV DOESN'T GET EASIER

Window Vision G5 Software Features

- Easy to use "I Want To" wizard provides fast access to all major features
- Vidsec is Silicor's partner company for Professional Interactive Video Surveillance. Vidsec can remotely monitor and protect your person and property. Visit www.vidsec.com for more details
- Direct interface access to Online Technical Support with TechChat
- System Administrators can create an unlimited number of user accounts. Each user account can be configured for specific permissions and restrictions
- Free lifetime software upgrades are available online
- Two composite video outputs for CCTV monitors. One output provides a single camera signal and the other output provides a multiplexed signal
- Watchdog monitors the DVR's integrity and triggers restarts to clear system issues for more reliability and stability
- Optional Healthwatch feature continuously monitors the system components and generates email notifications in the event of a fault
- In the event of a restart, the system can be configured to start various functions automatically
- PTZ (Pan/Tilt/Zoom) preset positions can easily be created. Each preset can also be linked to a Digital Input to automatically move the PTZ to the preset position
- Customizable features for Digital Inputs adds flexibility for users to add almost any type of Digital Input that they require
- Window Vision can be ordered in DVR (analog), NVR (Network IP) or Hybrid (analog and network IP) solutions
- Detailed Log Manager tracks all DVR activities
- Use the optional speaker switcher for up to 16 speaker channels
- Optional microphones can be added to the system to record up to 16 channels of audio
- Use the speaker switcher and microphone for up to 16 channels of two-way audio
- Remote Access Software allows the DVR to be administered remotely
- Recordings can be played back on the host or from a remote location
- Create Archives to permanently store specific recorded events
- When creating Archives and burning them to DVD, the Embedded Viewer allows Archives to be played back on a Microsoft Windows platform
- Window Vision uses both Static and Dynamic IP address', selectable ports, and functions through firewalls
- Multiple recording options, such as: Always Record, Record on Motion and Hybrid Recording on Motion
- Main View interface can be customized to display all available cameras, a single camera or four cameras in a 'Quad' display. All displays are available as full-screen
- Touring feature cycles multiple camera inputs in a single window. More than one window can be configured as a tour
- Up to 10x digital zoom on any camera
- Individual camera resolution settings include: 320x240, 640x240 and 640x480.
- Create snapshots of recorded or live video. These can be saved for exporting or later viewing
- Point of Sale terminals can connect to the DVR and can overlay transaction information on a camera view
- And much, much more!
